PROJECT HISTORY · DESIGN EVOLUTION · ENGLISH PLANS & SECTIONS

PROJECT READING / 01

A solid white volume, opened by inhabitable voids.

The Voids Villa reconsiders a suburban retreat as a connected spatial landscape. Leisure spaces occupy the lower floor, shared life unfolds at ground level and private rooms rise above. The architectural identity comes from the courtyards, bridges, stairs and brick-lined voids that join those layers.

LOCATION	Koohsar, Karaj, Iran	TYPE	Residential villa
ARCHITECTS	Solmaz Tatari · Ehsan Tavassoli	DATES	2021–2024
SITE AREA	1,000 m²	BUILT AREA	540 m²
STUDIO	AsNow Design & Construct	PHOTOGRAPHY	Mohammad Hossein Hamzelouei

Context

The site opens toward the more desirable north and west views and becomes protective toward possible future neighbours on the east and south. The result is a hybrid introverted–extroverted house.

Void system

A generous north garden, a smaller south court and a semi-central courtyard connect open and covered voids across all three levels, bringing daylight deeper into the building.

Movement

The circulation route permits wandering and discovery without requiring every journey to pass through private rooms. Stairs and bridges turn movement itself into an architectural experience.

Memory and material

An existing mature tree anchors the deepest court as a marker of time. White room volumes contrast with brick-toned circulation, making occupied rooms and connective voids visually distinct.

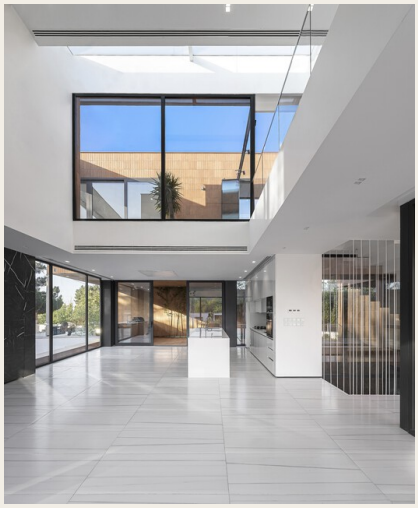

PROJECT PHOTOGRAPHY / 02

Built spaces and connected voids

Published project photography is presented as credited editorial reference material. These are standard project photographs, not panoramic tour renders.

Research note

Project facts and the architects' stated design intentions were checked against the Contemporary Architecture of Iran project archive and a secondary ArchDaily publication. This guide paraphrases those sources; it does not reproduce the architects' text.
