Chatrud, Kerman, Iran - Gera Studio Architects - 2022

PROJECT FILE / 01

Facts and credits

Project	Narbon Villa
Location	Chatrud, Kerman, Iran
Architecture firm	Gera Studio Architects
Lead architect	Hossein Namazi
Design team	Marzieh Mehranfar, Mehdi Arab Ameri, Amirmasoud Derikvand, Mehrad Ghaderi, Mohamad Shakori
Year	2022
Site area	11,000 sqm
Built area	350 sqm
Programme	Residential villa
Construction	Gera Studio
Structural engineering	Moeinedini
Electrical and mechanical	Kaveh Ahangar Davodi
Executive manager	Mehrdad Aghelnejad
Clients	Mostafa Manzori and Roya Jamshidi
Photography	Mohammad Hassan Ettefagh
Recognition	Joint first place, 15th Architecture and Interior Architecture Award, Memari-va-Sakhteman Magazine, 2023

HISTORY AND DESIGN INTENT / 02

From an inherited orchard to a climatic pavilion

Narbon Villa stands within a large orchard in Chatrud, near Kerman. The architects began by retaining the old thatched boundary wall and placing a new boundary behind it. A carefully cut opening and glass entrance preserve the memory of the garden edge while allowing passersby to perceive the mature plane trees and the watercourse that continues toward neighbouring agricultural land.

The arrival sequence connects garden and house through a sunken courtyard. Rather than treating shade as a secondary feature, the design uses level changes, deep walls and water to create a cooler threshold for Kerman's long hot days.

The retained garden boundary and renewed entrance

SPATIAL STRATEGY / 03

Two rifts capture sky, air and movement

The house is organised around two deep linear gaps described by the architects as sky rifts. They carry daylight and air through the composition, support cross-ventilation and make changing sun and shadow part of the daily experience. The house therefore reads less as a sealed object and more as a pavilion distributed between garden, interior and roof.

The second rift draws movement upward. High walls and roofs at several levels frame the orchard, create shade and reactivate the roof as a place for films, night gatherings and stargazing. A dense brick core binds these routes together and gives the internal sequence a tactile continuity.

KEY QUESTIONS / 04

Read the project through four questions

Why preserve the old garden wall?	Because it carries the physical memory of the orchard and its alleys. The new boundary works behind it, allowing continuity without turning the existing texture into decoration.
How does the sunken courtyard respond to climate?	Its lower level, water and enclosing surfaces create shade and a cooler intermediate zone between the entrance path and the house.
What do the two sky rifts do?	They are not only visual cuts. They organise movement, admit daylight, guide airflow and help the building change character as shadows move.
Why is the roof part of the programme?	The roof becomes an inhabited climatic landscape for outlook, film watching, night gatherings and stargazing rather than a residual technical surface.
